

The KING-GAGE® LP3 tank level system makes it easy to address applications requiring remote display terminals.

Using the LP3 Tank Level System's™ built-in web server, remote displays can be deployed over Ethernet or even via a wireless network (requires wireless router). It can be configured with the LP3 Remote Display Package offering various display options up to a 26-in. LCD touch screen display. These remote touch screen enabled monitors mimic the functionality of the main tank level display station and can be configured for plug and play operation.

LP3 Tank Inventory Monitoring System

- Monitor up to 32 tanks
- color touch screen HMI displays
- Ethernet communications plus built-in web server
- Optional remote display terminals

The LP3 system solution helps simplify process control integration, shares data throughout your enterprise and ensures accurate inventory monitoring. Tanks are graphically displayed on the screen and include a simple bargraph icon to convey tank level status at a glance. As a complete level measurement and inventory monitoring solution, the LP3 system is intended for operations with multiple tanks or process vessels.
